

Public feedback/comments are invited

Owing to the current and anticipated rapid growth in the residential building stock across India and considering the importance of energy conservation in residential building, the Bureau of Energy Efficiency, Government of India has launched the Energy Conservation Building Code for Residential Buildings. This code is known as the "Eco Niwas Samhita" and it has been published two volumes. In this context, the EMC Kerala recommend to accept the "Eco Niwas Samhita" (ENS), the central code published by the Bureau of Energy Efficiency to be made applicable in Kerala and to follow the guidelines for buildings in "Warm and Humid" climatic condition, as Kerala falls under this particular climatic zone.

In this regard, a draft notification regarding implementation of Energy Conservation Building Code for Residential Buildings in the State has been prepared and given below. Eco-Niwas Samhita published by the BEE is also given below for reference. Public can submit their feedback or comments on the given draft notification on or before 10th April 2022 to EMC-Kerala.
